

Project 3 – School's Programme

Aim - To develop an educational programme to empower the next generation with critical thinking skills, leadership opportunities and passion to help them to stand up for the planet they will inherit

Overview –

The WCMC have developed a series of 12 climate change lessons aimed at year 5 & 6 pupils, covering topics such as coastal management, weather and mapping risk. Each lesson has been designed to be knowledge, experience and skills based in line with the New Curriculum (September 2022). The purpose of each lesson is to make the impacts of climate change less abstract and more accessible, to help prepare the future generation to mitigate impacts. Each lesson comes with a detailed lesson plan and include engaging activities such as designing weather stations, measuring sea level rise and creating risk maps.

All 12 lessons and lesson plans are freely available. Please email walescmc@gmail.com if you are interested in accessing this resource.

Who – Leah Phillips, Nia Hicks, Myah Horsford, Gwyn Nelson, Hannah Richards, Lucy Attwood

INTRODUCTION TO CLIMATE CHANGE and WEATHER

In this lesson we will be carrying on our investigation into Climate change, but looking more specifically at the weather.
